

— CYBERSECURITY / 01

# 360° security over the business, *not just over the technology.*

Today the greatest added value lies in protecting the systems that support the business. We deliver a complete, 360-degree cybersecurity solution in every project we take part in.

Combined with our deep knowledge of the environment, we identify, assess, define and manage the interfaces of the many systems involved — for a higher-performing solution in operation, security and comfort.

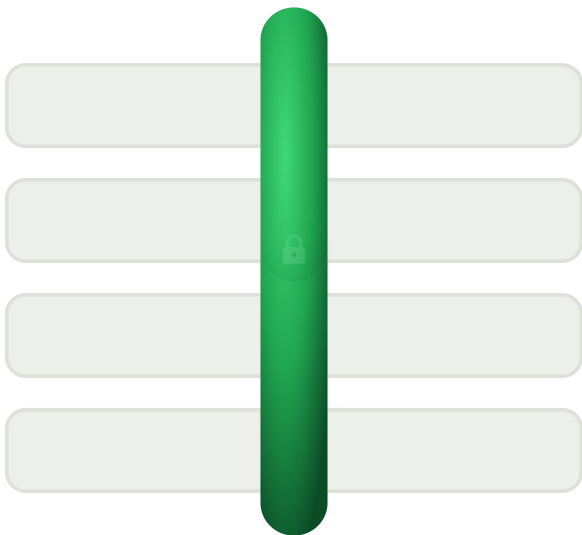

LET'S TALK ABOUT YOUR PROJECT →

SECURITY BY DESIGN

— 02 / WHAT 360 MEANS

## Not a layer. *A backbone.*

### A BACKBONE

Runs through every layer

#### ● BY DESIGN

### Present from day one

Security engineered into the architecture from the design stage — never bolted on at the end.

#### ● OVER THE BUSINESS

### Protecting what sustains it

We protect the systems the operation runs on, not just isolated devices — the whole IT/OT estate.

#### ● INTERFACES

### Where systems meet

We identify, assess and manage the interfaces between systems — the riskiest and most valuable points.
